

Cleaning instructions for RBSI tiles

1. The tiles in the RBSI gamma are made of rubber granules and a polyurethane binder. They are porous.

The tiles need a minimum of maintenance.

	inside	outside
how	Warm water with a brush and floor cloth !!! important notice: the product should not be soaked in water, as mould can occur	high - pressure waterjet (80 - 100 bars) making sure the water can evaporate
product	all types of detergent (non-aggressive alkaline), with thorough rinsing	all types of detergent (non-aggressive alkaline), with thorough rinsing
frequency	weekly (depending on usage)	monthly (depending on usage)
not allowed to	rinse with lots of water when the drainage of dirty water is not assured mechanical cleaning without water, type brush with hard hairs or with acid detergents	
suggestions	besides regular maintenance also foresee maintenance with water vacuum cleaner yearly	besides regular maintenance: if surface is bent, general cleaning with lots of water at low pressure

With normal use and regular maintenance the tiles can withstand time very easily.
